

morphforge

Biophysical simulation in Python

Mike Hull (s0897465@sms.ed.ac.uk)

University of Edinburgh

University of Bristol

FACETS Code Jam #4

Marseille 22-24 June 2010

Outline

- Introduction
 - ▶ My research
 - ▶ Motivation
 - ▶ What is morphforge?
- Morphforge
 - ▶ Morphologies
 - ▶ Simulations
 - ▶ Sweeps
- From Here
 - ▶ Wishlist
 - ▶ Collaborations

About Me & My Work

- ▶ Collaboration with Alan Robert's experimental lab

About Me & My Work

- ▶ Collaboration with Alan Robert's experimental lab
- ▶ Locomotive networks in *Xenopus laevis* tadpoles

About Me & My Work

- ▶ Collaboration with Alan Robert's experimental lab
- ▶ Locomotive networks in *Xenopus laevis* tadpoles
- ▶ Modelling:
 - ▶ Small Networks (2000 neurons)

About Me & My Work

- ▶ Collaboration with Alan Robert's experimental lab
- ▶ Locomotive networks in *Xenopus laevis* tadpoles
- ▶ Modelling:
 - ▶ Small Networks (2000 neurons)
 - ▶ Hodgekin-Huxley type models of different neuron classes

About Me & My Work

- ▶ Collaboration with Alan Robert's experimental lab
- ▶ Locomotive networks in *Xenopus laevis* tadpoles
- ▶ Modelling:
 - ▶ Small Networks (2000 neurons)
 - ▶ Hodgekin-Huxley type models of different neuron classes
 - ▶ Morphology of neurons important due to electrical coupling

Previous Workflow (MSc Project)

- ▶ Initial channel modelling
Handwritten .hoc & .mod files (NEURON)

Previous Workflow (MSc Project)

- ▶ Effects of changing parameters
Cheetah generated .hoc & .mod files, scripts for building, re-import data as CSV for plotting

Previous Workflow (MSc Project)

▶ ... *months passed* ...

Previous Workflow (MSc Project)

- ▶ Network modelling
2 × YAML + XML files converted into another XML neuron containing network & output specification \implies cheetah generated .hoc & .mod files, Makefiles for building, re-import data from csv as for plotting, caching of results in a directory.

Previous Workflow (MSc Project)

- ▶ Time for a rethink ?!?!?

Motivation

- Morphology
 - ▶ FACETS Code Jam '09 - Phillip Rautenberg
 - ▶ Morphology Reconstructions in Bristol
 - ▶ DIADEM Project
- Simulation
 - ▶ Large Parameter Sweeps

What is morphforge?

Python Libraries for:

- ▶ Handling neural **morphologies**

What is morphforge?

Python Libraries for:

- ▶ Handling neural **morphologies**
- ▶ Defining & running **biophysical simulations**

What is morphforge?

Python Libraries for:

- ▶ Handling neural **morphologies**
- ▶ Defining & running **biophysical simulations**
- ▶ Analysing & storing simulation **results**

What is morphforge?

Python Libraries for:

- ▶ Handling neural **morphologies**
- ▶ Defining & running **biophysical simulations**
- ▶ Analysing & storing simulation **results**
- ▶ Simplifying **parameter sweeps**

Morphologies

Morphologies

- ▶ Represent morphologies as a **tree of cylinders**
- ▶ Cylinders can be assigned regions and/or id's.

Import/Export & Visualisation

- ▶ Create morphologies in Python
- ▶ Load and save **.swc** files.
- ▶ Load **MorphML** files

Import/Export & Visualisation

- ▶ Create morphologies in Python
- ▶ Load and save **.swc** files.
- ▶ Load **MorphML** files
- ▶ Morphologies can be visualised using:
 - ▶ 2D projections in **matplotlib**
 - ▶ 3D visualisation in **MayaVi**

Analysis & Manipulation

- ▶ General purpose data structure
- ▶ Minimal classes + loose coupling \implies **Visitor** pattern
- ▶ (Example of straightening tadpole)

Examples

Simulations

Simulation Overview

- ▶ Simulator Agnostic Description of:
 - ▶ Neurons
 - ▶ Active membrane channels (HH-style)
 - ▶ Passive membrane properties
 - ▶ Voltage & current clamps
 - ▶ Recording electrodes (voltages, currents & membrane properties)

Simulation Overview

- ▶ Simulator Agnostic Description of:
 - ▶ Neurons
 - ▶ Active membrane channels (HH-style)
 - ▶ Passive membrane properties
 - ▶ Voltage & current clamps
 - ▶ Recording electrodes (voltages, currents & membrane properties)
- ▶ Handles units

Simulation Overview

- ▶ Simulator Agnostic Description of:
 - ▶ Neurons
 - ▶ Active membrane channels (HH-style)
 - ▶ Passive membrane properties
 - ▶ Voltage & current clamps
 - ▶ Recording electrodes (voltages, currents & membrane properties)
- ▶ Handles units
- ▶ Simplification of plotting

Simulation Overview

- ▶ Simulator Agnostic Description of:
 - ▶ Neurons
 - ▶ Active membrane channels (HH-style)
 - ▶ Passive membrane properties
 - ▶ Voltage & current clamps
 - ▶ Recording electrodes (voltages, currents & membrane properties)
- ▶ Handles units
- ▶ Simplification of plotting
- ▶ Basic trace analysis

Simulation Overview

- ▶ Simulator Agnostic Description of:
 - ▶ Neurons
 - ▶ Active membrane channels (HH-style)
 - ▶ Passive membrane properties
 - ▶ Voltage & current clamps
 - ▶ Recording electrodes (voltages, currents & membrane properties)
- ▶ Handles units
- ▶ Simplification of plotting
- ▶ Basic trace analysis
- ▶ Caching simulation results

Neuron Specific

- ▶ Uses python-neuron interface
- ▶ Use existing .mod files directly
- ▶ Behind the scenes:
 - ▶ Generate .hoc and .mod files
 - ▶ Compiles .mod files
 - ▶ Registers .mod files into neuron-instance

Simulation Examples

Sweeps & Bundles

Bundles

A wrapper around Simulation objects, in order to:

- ▶ Attach pre/post-simulation **functors**
- ▶ Encapsulate **serialisation**

Bundle

```
def load(...):  
def save(...):  
  
def addPreFunctor(...):  
def addPostSimFunctor(...):  
  
def execute(...):
```

A 'Bundle'
wraps
a 'Simulation'

Simulation

```
def addNeuron(...):  
def addCurrentClamp(...):  
def addVoltageClamp(...):  
  
def recordVoltage(...):  
def recordCurrent(...):  
  
def Simulate(...):
```

Bundle::execute()

Execute Pre-Sim Actions

Run Simulation::Simulate()

Execute Post-Sim Actions

Parameter Sweeps

A simple mechanism for distributing simulations over XML-RPC has been written; comprising a **BundleServer** and **BundleClient**;

- ▶ the user needs to write a function returning a list of simulation-bundles to run, for the BundleServer.

Parameter Sweeps

A simple mechanism for distributing simulations over XML-RPC has been written; comprising a **BundleServer** and **BundleClient**;

- ▶ the user needs to write a function returning a list of simulation-bundles to run, for the BundleServer.
 - ▶ for example, this could have a post-sim functor that analyses the output voltage traces and writes a row to a DB somewhere.

Parameter Sweeps

A simple mechanism for distributing simulations over XML-RPC has been written; comprising a **BundleServer** and **BundleClient**;

- ▶ the user needs to write a function returning a list of simulation-bundles to run, for the BundleServer.
 - ▶ for example, this could have a post-sim functor that analyses the output voltage traces and writes a row to a DB somewhere.
- ▶ The BundleServer is started on a single machine and acts as a daemon, keeping a track of which bundles have been handed out to which clients.

Parameter Sweeps

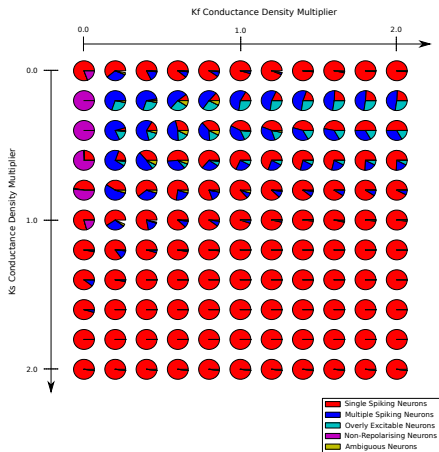

A simple mechanism for distributing simulations over XML-RPC has been written; comprising a **BundleServer** and **BundleClient**;

- ▶ the user needs to write a function returning a list of simulation-bundles to run, for the BundleServer.
 - ▶ for example, this could have a post-sim functor that analyses the output voltage traces and writes a row to a DB somewhere.
- ▶ The BundleServer is started on a single machine and acts as a daemon, keeping a track of which bundles have been handed out to which clients.
- ▶ The BundleClient can be started on many clients. Each client contacts the server, requests n Bundles, runs them, notifies the server about whether bundles ran successfully or not, then requests more bundles....

Parameter Sweeps Results Examples

- ▶ Modelling the effects of conductances on firing behaviour
- ▶ Na, Ca, Kf, Ks, Lk channels + injected current
- ▶ 110,000 simulations run in a night over 30 computers

Parameter Sweeps Results Examples

From Here

WishList

- High Priority
 - ▶ Interface for neural connectivity
 - ▶ Documentation & testing
- Low Priority
 - ▶ Summary pdfs/tex output
 - ▶ Loading *ML formats

Collaboration

- ▶ Code is in a mercurial repository - email s0897465@sms.ed.ac.uk
- ▶ To be made public (advice on open licenses)
- ▶ Is this useful to other people?
- ▶ Integration with other open-source tools
- ▶ Keen to find collaboration.....

Acknowledgements

- ▶ Juan Reyero (Magnitude Units Package)
- ▶ Enthought (MayaVi Package)
- ▶ Everyone working on scientific python libraries!
- ▶ NEURON & Python Interface
- ▶ Organisers of Code Jams
- ▶ Supervisors: Alan Roberts & David Willshaw

Thankyou!
